THE WOVEN INTERLOCK CONSTRUCTION

THE UNCRUSHABLES™

PERFORMANCE, STRENGTH, DURABILITY AND AESTHETICS FOR THE LIFE OF THE CARPET

CONSTRUCTION BENEFITS

Fully Interlocked Construction

- Backing & Face Yarns Interlocked Simultaneously
- Performance Due to Construction—Not Latex

Unique Independent Loop Construction

- No Traffic Lanes
- Crush Resistant

Counter-Coiled Loops — Uncrushable™

- Loops Spring Back after Each Step
- Durability Regardless of Weight

Loops Anchored in Backing Chain Yarns

- Impossible to Zipper—Wet or Dry
- Impossible to Edge Ravel—Wet or Dry

Resistant to Liquids

- Interlaced Components Not Affected by Liquids
- 20 Lb. Plus Tuft Bind—Wet or Dry

Interlocked Yarns

- 30 Lb. Run Resistance—Yarn Breaks before Pulling

Full 10 Year "Texture Retention Warranty"

- Independent, Counter-coiled Loops Resist Crushing

Impossible to Delaminate

- No Secondary Backing

Unparalleled Lifetime Warranties

- 30 Lb. Zipper, Edge Ravel, Delamination, Static, Wear, 20 Lb. Plus Tuft Bind

Lowest Life Cycle Costs

- 15-20 Year Life Cycle
- High ROI (Return on Investment)

Track Record

- Half Century of Proven Performance
- No Failures

Impact on Environment

- Passes Stringent EPA and CRI Emissions Guidelines
- Low VOC's

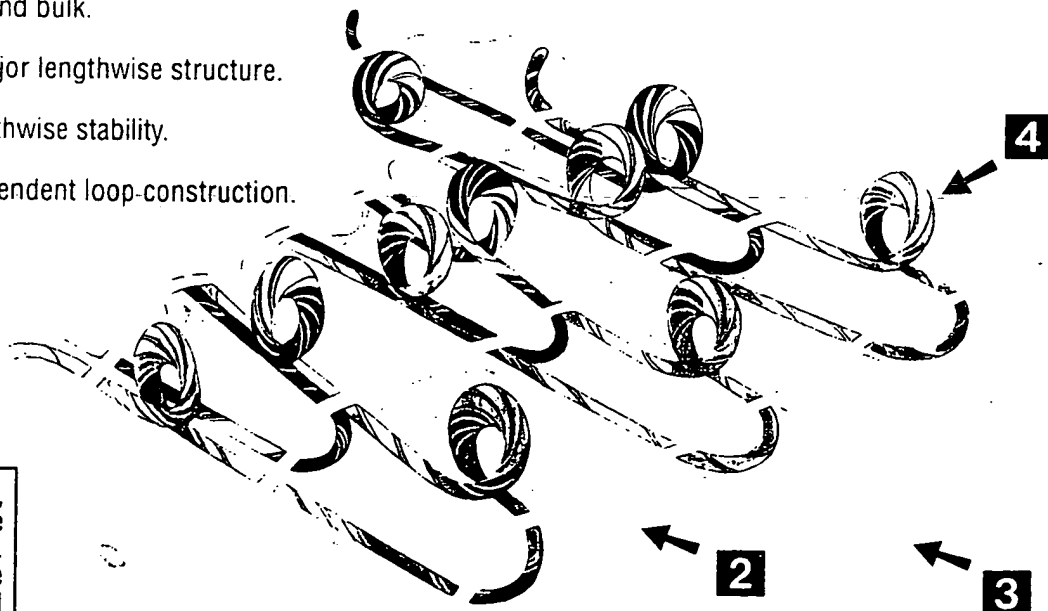

CONSTRUCTION OVERVIEW

Stuffer yarns add body and bulk.

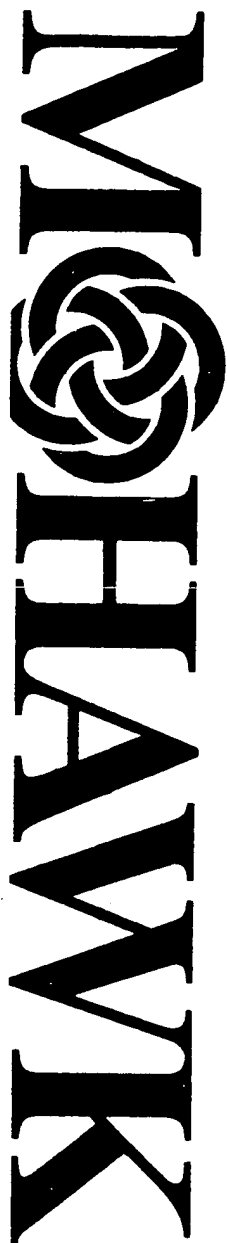

Chain yarns serve as major lengthwise structure.

Filling yarns provide widthwise stability.

Face yarns feature independent loop-construction.

In the woven interlock process, backing yarns and face yarns are interlocked simultaneously. This is one of the keys to the extraordinary durability and performance of woven interlock.
